# 3D MODELIRANJE PROJEKT

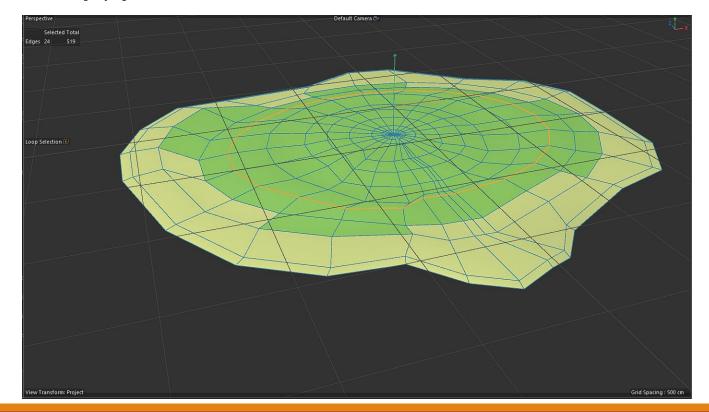

NAPRAVIO: VEDRAN KRAVAICA

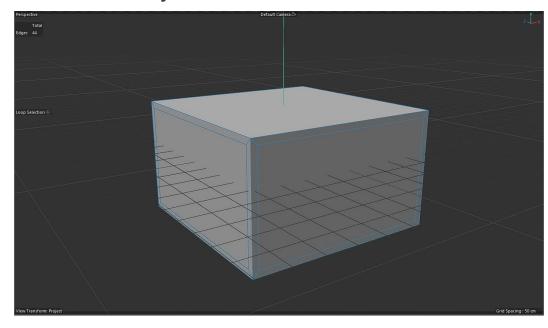

Krenuo sam sa izradom otoka kreiravši krug (Disc) sa 11 disc segmenata i 21 rotation segmenata

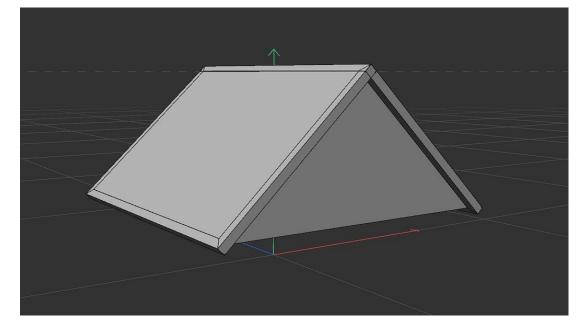

Oblikovao sam ga ručno na način da sam sa Loop Toolom dok sam selectao edges ili points i nadodao razlicite boje da se odvoji pijesak od trave

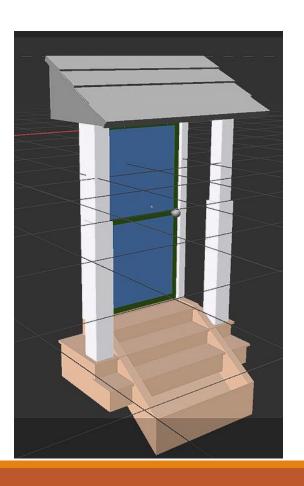

Bazu kuće sam napravio od kocke koju sam oblikovao sa scale a krov od polygon triangla kojeg sam extrudeo da dobijem oblik podkrovlja koje sam inserto prema van pa ponovno extrudeo kako bi dobila debljinu

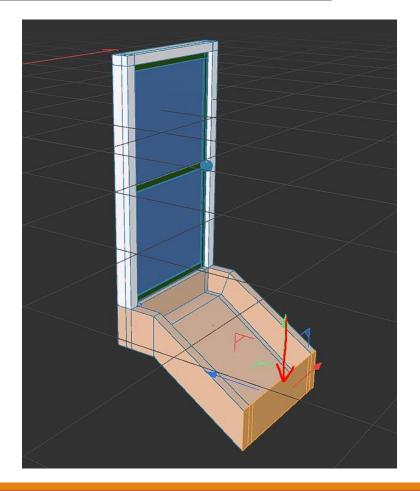

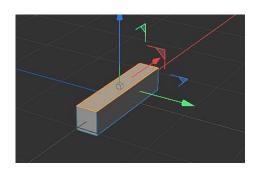

Ulaz:

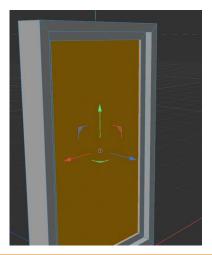

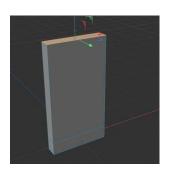

Kreirao od kocke koju sam extrudeo čiji sam kraj označio i pomaknuo ka dolje kako bi dobio bazu za stepenice

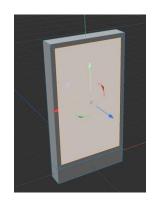

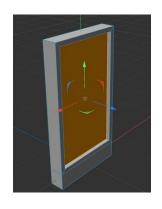

#### Vrata:

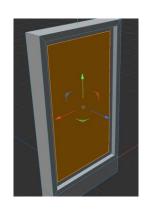

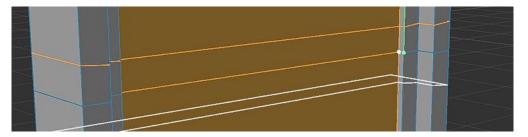

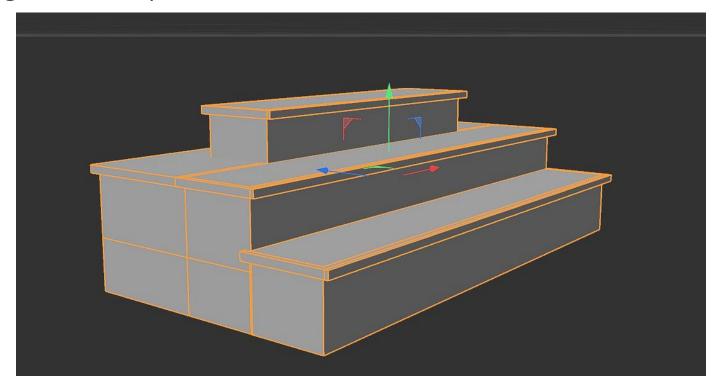

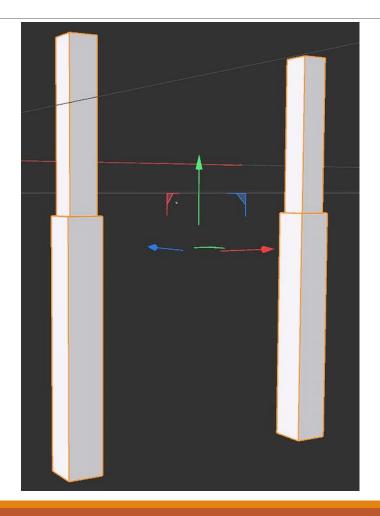

kvaku sam kreirao pomoću sfere a prečku po sredini sa loop cut toola kako bi zarezao zatim extrudao objek tako da izgleda dobro

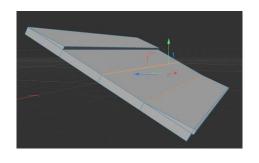

Stepenice od vrata su skup kocki od kojih sam dio insertao prema van zatim extrudeo kako bi dobio efekt gazišta na stepenici

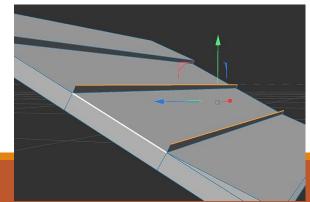

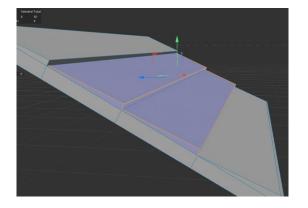

Stupove sam kreirao sa kockom koju sam oblikovao sa scale zatim insertao pa extrude kako bi produžio suženi dio

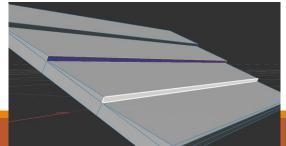

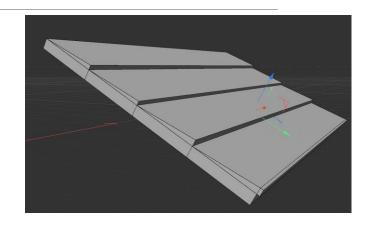

Krov je jedan trokut ka kojeg je nadodan još jeda objekt kocke koju sam podijelio sa Loop Cut na 4 dijela čije sam crte iskoristio da ih Extrude-am pa Bavel-am nakon čega sam zatvorio rupu sa Close Polygon Hole

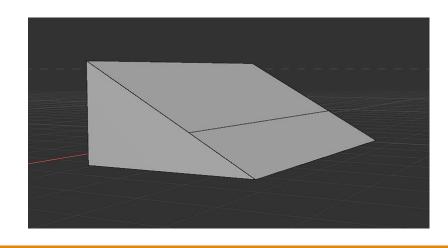

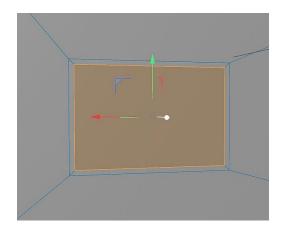

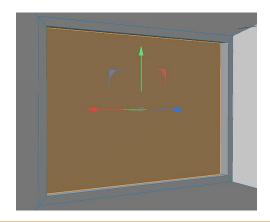

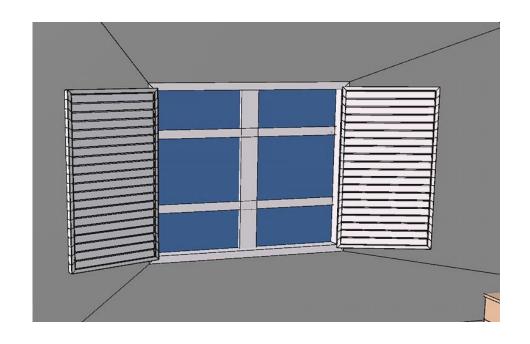

Prozore sam kreirao Insertanjem strane kocke kuće 2 puta (2. put je zbog obruba prozora) zatim Extrude prema unutra kako bi se dobila dubina

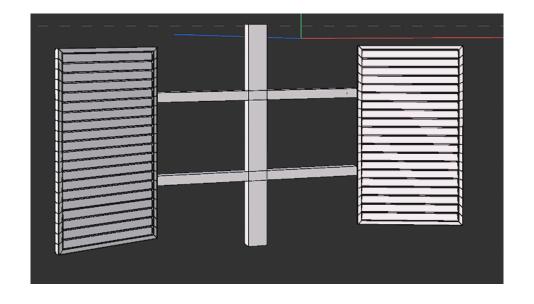

Detalji na prozoru su napravljeni od kocki oblikovanih u pravokutnik.

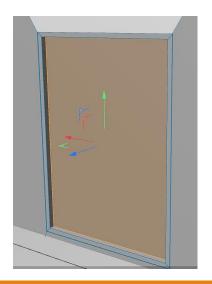

Kocke roleti su oblikovane zatim Insert-ane i pa Extrude-ane prema unutra te podjeljene sa Loop-Cut toolom na 20 djelova. Crte koje ih djele sam Extrudo zatim Bavelo kako bi dobio efekt sa su poluotovorene i nagunte

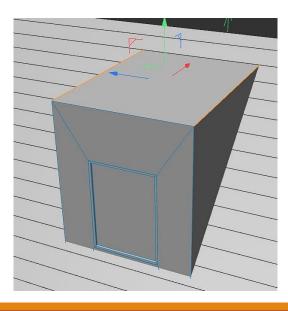

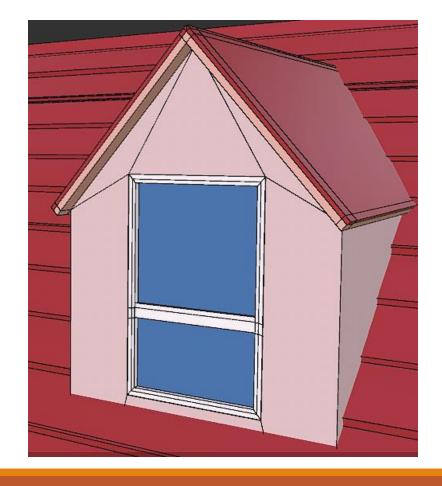

Prozor u podkrovlju sam napravio pomoću nove kocke kojoj sam stranu insertao pa extrudeo i iskoristio loop cut za poprečnu dasku

Krović sam ureduio pomoću Bavela, extrudea i

inserta

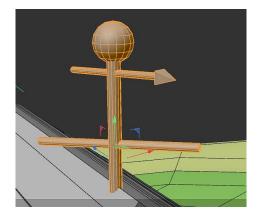

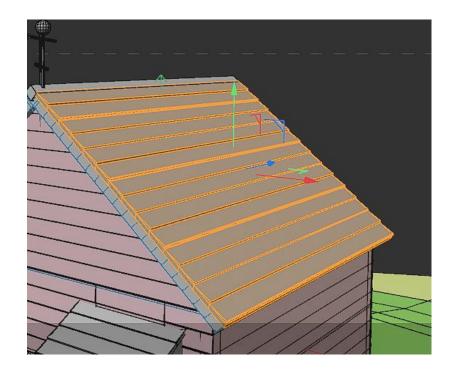

Krov sam napravio na isti način kao i krović iznad ulaza samo sam ga scale-o kako bi prekrio cijeli krov na obje strane

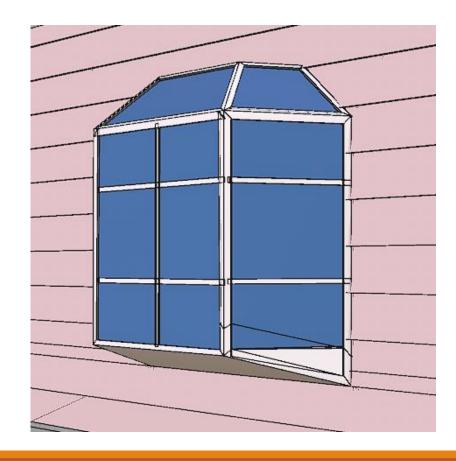

Pokazivač vjetra sam napravio od 3 valjka, sfere i piramide

Prozor sa strane sam krenuo raditi na sličan način kao i prvi prozor ali sam ga Extrudao prvo prema van nakon čega sam Bavelo gornje rubove kako bi dobio nakošene prozore i ponovno Extrudeao

Poprečne daske sam kreirao od kocki koje sam oblikovao u pravokutnike

Za tekst sam iskoristio Text Spline unutar kojeg sam unio željeni tekst i onda dodao Extrude opciju i povukao tekst unutar Extrudea da se postavi te podesio debljinu i visinu slova
